resources.}|images/stories/fdlpnews/cataloging/metalib-new-resources.png{/rokbox}

As part of the U.S. Government Printing Office's (GPO) ongoing efforts to expand the Federal database collection in MetaLib, users can now simultaneously search the Federal Digital System (FDsys) and the Catalog of U.S. Government Publications (CGP) through a single search box in [MetaLib](#) via the new predefined search set "GPO Resources".

The ability to further refine search results has also been enhanced with the release of the "Resources" option. After searching the "GPO Resources" predefined search set, the "clusters and facets" module, available on the righthand column of the screen, allows users to narrow their search by categories, such as topics, dates, authors, and resources.

GPO is continually working to examine and test configurations of additional Federal databases for potential inclusion in our MetaLib implementation. Minor cosmetic changes will continue to be made to the MetaLib interface as needed.
